

➔ Filter MEDIA

Aqua Flair supplies a complete range of premium water-treatment filter media for residential, commercial, and industrial use—delivering efficient filtration, long service life, and consistent water quality at competitive prices..

➔ Sand & Gravel

High-purity graded sand and support gravel for multimedia filters, pressure sand filters, and RO pre-treatment. Provides effective turbidity reduction, stable filtration, and long media life with uniform particle size for consistent flow and efficient solids removal.

➔ Anthracite Filter

High-purity coal-based anthracite for dual-media and multimedia filters. Its low density and high hardness provide deeper filtration, longer run cycles, and reduced pressure drop—ideal for municipal, industrial, and commercial sediment removal

➔ Ion Exchange Resins

Premium resins for softening, demineralization, and high-purity water treatment, offering strong exchange capacity and reliable performance for residential, commercial, and industrial systems.

Model	Description	key Features	Options
Sand & Gravel	Pre-filter media for PSF/MMF	Uniform size, high strength	Sand 0.4-2mm, Gravel 3-20mm
Anthracite	Multimedia filtration	Low pressure drop, long cycles	0.8—1.6mm, 2mm
Activated Carbon	Chlorine & organics removal	High iodine value	Coal, Coconut 8×30, 12×40
Ion Exchange Resin	Water softening & demineralising	High capacity, fast kinetics	Cation, Anion, Mixed Bed, Gel/MP
